

KURZPROTOKOLL
BMAD-TX

Öffentlicher Titel	Untersuchung des Microcor-Systems bei dekompensierter Herzinsuffizienz
Wissenschaftl. Titel	Benefits of Microcor in Ambulatory Decompensated Heart Failure
Kurztitel	BMAD-TX
Studienart	Diagnostikstudie, multizentrisch, prospektiv, offen/unverblindet, einarmig
Studienphase	nicht zutreffend
Erkrankung	Herz und Kreislauf: Herzinsuffizienz
Einschlusskriterien	- Subjects hospitalized for acute decompensated heart failure and enrolled in the study within 10 days post-hospital discharge - Subjects who have had an acute heart failure event requiring medical management in the previous 180 days of index hospitalization admission. This acute heart failure event admission must be at least 2 weeks apart from the event admission in (1)
Ausschlusskriterien	- Subjects who are wearing the wearable cardioverter defibrillator (WCD) - Subjects not expected to survive one year from enrollment from non-cardiac disease - Subjects with skin allergy or sensitivity to medical adhesives - Subjects anticipated to start dialysis within 90 days - Subjects currently implanted with an S-ICD system - Subjects who received a percutaneous coronary intervention (PCI) less than 24 hours after onset of heart failure related symptoms during index hospitalization - Subjects who are unable to participate in all follow up visits - Subjects participating in research other than a registry at the time of enrollment - Subjects currently implanted with an LVAD - Subjects with self-reported pregnancy - Subjects currently being actively managed with any device based remote HF monitoring
Alter	21 Jahre und älter
Sponsor	Zoll Medical Corporation
Registrierung in anderen Studienregistern	ClinicalTrials.gov NCT04096040 (primäres Register)
